Dear Neighbour

## **Tansterne Advanced Biomass Plant - Commissioning**

We are pleased to let you know that we have largely completed the construction phase of our project and have now started hot commissioning.

The Plant will have two boilers and a steam turbine generator which will produce our renewable energy. The first boiler and the steam turbine generator will become operational over the coming weeks.

During this period there will be a series of “steam blows” where steam will be vented through a silencer to the atmosphere. We need to do this to make sure the pipes taking the steam to the turbine are scrupulously clean. This can result in some noise but we will aim to carry out these blows between 7am and 7pm and will minimise noise around the site whenever we can.

You may also see plumes of steam evolving from the site. This is normal while venting and it is only pure, clean steam.

Once the first boiler is fully operational, we will need to carry out similar steam blows on the second boiler a couple of months later.

We appreciate this may cause you some inconvenience but assure you that this activity will be short-lived.

Thank you for your continued support for our award winning project and if you would like to discuss any aspect of the work we are doing, please do not hesitate to contact us.

Yours sincerely

Mark Wickham  
Managing Director
